Creating Unique Solutions to Meet Your Requirements

Munro's design approach has impressed engineers and industrial professionals around the world. Some of our control concepts have caused long-time professionals to change their thinking about long-standing designs. We keep things as simple as possible, for ease of installation, use and service, but we're well equipped for complex projects.

Munro seeks out new technology and design methods to offer greater station reliability and significant cost savings. We create custom systems, designed, built, tested and serviced with a personal commitment to solving customer needs. Each system is designed and specified according to individual customer requirements, ensuring all needs and budget guidelines are met. We can help you identify the problem and apply our expertise to solve it.

Safety and Quality are Our Top Priorities

With our innovative product line and unmatched expertise, we can offer stations with unprecedented reliability and performance. Our components meet rigid standards of quality excellence and reliability that exceed industry regulations.

Munro pump stations are wired, piped hydraulically, and tested electrically against known quality guidelines and design parameters prior to shipment. Attention to detail and quality control in assembly ensures a smooth start up and lasting performance. All Munro electrical panels and packaged systems are listed with the Underwriters Laboratory (UL 508A, QCZJ) which designates that our products meet rigorous safety requirements.

We Stand Behind our Stations with Service and Support

Munro's team designs, builds, tests and services our pump stations with a personal commitment to meeting your needs and exceeding your expectations.

Designed – Our project management team designs and coordinates your project according to your requirements, ensuring specifications, timing and budget guidelines are met.

Built – We're in touch and available from RFQ to start up.

Tested – Our test facility allows us to replicate field conditions of lift or incoming pressure to ensure that performance specifications are met.

Serviced – Our in-house troubleshooting team, along with our network of Authorized Service Providers (ASPs), supports our products throughout their lifecycle.

Munro Remote Monitoring

Know Your Pump Station's Status Anywhere, Anytime.

With Munro Remote Monitoring, you stay in the know. Our system is web-based so you can use any device with an internet connection to get instant access to system data with just a secure log-in.

- Easy to navigate interface puts system data at your fingertips
- Visual reporting of critical information including system pressure, actual flow, motor speed and motor current
- Alerts for station faults or alarms
- All hardware and software is located on one unit
- Uses a standard web browser as interface – no software to purchase, install or maintain
- All you need is an internet-ready device

With Munro Remote Monitoring, there is no wondering or worrying about your pump station.

HISTORY

Although pump, pipe and valve technology has seen only minor changes since we started building pump stations in 1970, the technology that drives how the pumps are controlled has changed dramatically! Munro has been on the cutting edge of those changes through the use of Variable Frequency Drives (VFDs), Relay Logic Controllers, and Programmable Logic Controllers (PLCs), long before they became the industry standard.

We've been working with customers from around the globe for nearly 50 years to solve problems and build the right solutions for each unique application. We look forward to an opportunity to work with you.
