

LP300B

3HP, 208V, 1Ph, 17A, 60Hz, 95lbs.

MUNRO LP300B Pump

- **Brass Impeller** - Durable and low maintenance with the longest life in its class
- **Silica Carbide Seal** - proven toughness stands up to less than ideal situations
- **Cast Iron Body and Internal Components** - Heavy duty for long-term performance and reliability

COMMON APPLICATIONS

- **Residential turf Irrigation** - Drawing water from ponds, lakes, streams, cisterns and shallow wells
- **Booster** - Boost domestic water pressure for use in irrigation
- **Water Transfer**

ADVANTAGES

- **Durable and Long Lasting** – Our cast iron construction and brass impeller mean that our self-priming pumps are built to stand the test of time. Testing in tough conditions shows Munro LP series pumps last up to four times as long as typical
- **Industry Leading Performance to Horsepower** – In many cases a lower horsepower Munro LP pump will meet the same gpm performance that you'd expect to see only in higher horsepower pumps. With greater starting torque and an efficient run cycle, our pumps truly lead the pack.
- **Easy to install and maintain** – With two priming ports and a durable steel base plate, installing a Munro LP Series is a snap. When it is time to maintain or winterize the pump, you'll love our two drain valves.
