

Munro is seeking a Jr. Engineering Associate!

Join the irrigation industry's premier and preferred manufacturer of pumps, pump controls and pump stations, based right here in Grand Junction, to contribute to product excellence as we prepare for consistent, sustainable growth through our network of distributors and specifiers across North America.

The right candidate will...

1. Be a team player
2. Be enthusiastic about creating excellent and consistent products
3. Have entry level engineering skills

You'll spend your days...

1. Collaborating with and supporting your team
2. Contributing to product quality, improvement, and development
3. Participating in projects that contribute to the success of the company

Munro offers you...

1. An opportunity to utilize your talents to contribute to a great team
2. A collaborative, positive team in a casual work environment
3. Competitive compensation

Position: Jr. Engineering Associate

Reports to:

Engineering Project Manager

Job classification:

Full-time, hourly

Description:

Munro manufactures a range of irrigation products from small electronic control boxes to irrigation pumps, to pumping stations. Munro products are known for quality and reliability – which helps us stand out from the competition. The Jr. Engineering Associate is responsible for participating in engineering projects, for both quality management and improvement and also new product development. Duties will include contributing to projects throughout every stage of development and/or improvement; working with stakeholders throughout the company; and following QMS requirements for documentation and reporting.

Primary Responsibilities

- Product development and improvement

- o Participate in ideation and feasibility exercises for new products and product improvements.
- o Adhere to timelines and budgets for projects.
- o Maintain project documentation to ensure that projects are executed and recorded properly.
- o Participate in risk management to minimize project risks.
- o Participate in testing and inspection for samples.
- Drawing and process control:
 - o Adheres to drawing control process, working with Product Management, Quality Management and CAD technician to maintain, manage and document changes and version control.
 - o Participates in manufacturing process refining, documenting and management.
- Quality & Product management
 - o Participate in testing/inspection for initial shipments
 - o Participate in maintenance & calibration testing machines/measuring equipment
 - o Participate in investigating & recording product quality issues
 - o Participate in testing products to determine product abilities
 - o Participate in supporting Product Management in identifying, resolving, documenting, & tracking quality issues and resolutions
- Contributes to product excellence and market penetration by identifying and reviewing possible product enhancements and new product development.
- Proactively seek opportunities to engage with and support the team – team player.

Qualifications

- Education level: Progress toward a Bachelor's degree in mechanical or related engineering field required.
- Past experience: Prior manufacturing experience is a plus.
- Computer skills: Must be able to navigate a wide range of computer programs with ease, including Microsoft Office. Ability to quickly learn and retain knowledge of new computer programs. Experience with SolidWorks a plus.
- Attention to Detail: Ability to work with precision and contribute to identifying and solving problems or correct errors.
- Analytical Skills: Strong problem-solving ability.
- Time management: Ability to manage time to complete tasks and manage multiple projects simultaneously.
- Communication skills: Ability to communicate complex problems to team members
- Enthusiastic, high energy, results driven, solid work ethic.
