

Made for Irrigation!

Stainless Steel Basket Strainers & Irrigation Foot Valves 2" and 3" – 1/8" Holes

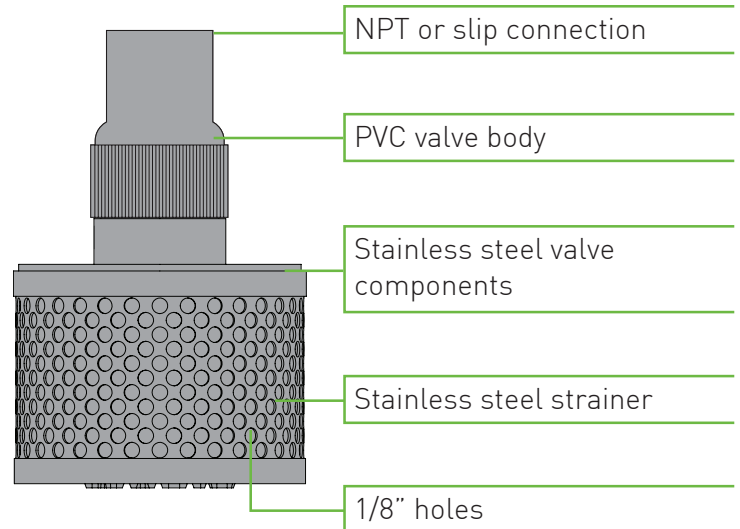

High tensile stainless steel means these strainers are built to last. 1/8" holes efficiently strain water for lawn pumps.

- Reduces clogging in the pump
- Low input velocity reduces blockage of the strainer

The only foot valve designed specifically for irrigation, these spring-loaded valves are non-corrosive and available in national pipe thread or PVC slip.

- Flow velocities similar to larger valves
- Repairable
- Will perform in any position
